Detailed course objectives for MATH 110 will be updated soon.

Description

MATH 110 focuses applications of algebra and trigonometry used in non-calculus introductory chemistry, and physics. These require computational skills including scientific notation, accuracy with units. Polynomials, exponential, logarithmic, trigonometric functions with period, amplitude, phase shifts and wavelength are included.

Prerequisite(s)

MATH 100 ("C" or better) OR MATH 105Z ("C" or better)
